DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I wherein the elected spectator ligand species is imine ligand, claims 1-7 and 9, in the reply filed on September 12, 2008 is acknowledged.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-7 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mackenzie et al. (US 6,245,871).

The instant claims are directed to a process for olefin polymerization in the presence of the catalyst comprising an aluminum containing cocatalyst, a metal-organic reagent and a spectator ligand.

Mackenzie disclosed an olefin polymerization process in the presence a catalyst composition generated in situ from (i) a Group 8-10 transition metal M, (ii) one or more neutral Lewis acids such as aluminoxane, and (iii) a binucleating compound of formula (ii) (col. 7, lines 11-33; and Claim 39). Mackenzie's teaching anticipates the instant claims.
